III INVESTMENT OBJECTIVE AND STRATEGY

PP Multi Asset Opportunities is a dynamic Multi Asset Management Strategy investing and trading in 3 different time horizons. Through spreading the risk on 3 different trading models the goal of PP Multi Asset is to generate a positive return without having any benchmark.

The main focus of the trading ideas is to detect anomalies based on undervaluation/overvaluation, special situations, cyclical fluctuation, short term impacts as well as technical analysis. In other words, the different trading models try to predict the reversal of a trend.

The short-term trading model is mainly focusing on technical analysis whereas the medium to long term model main focus lies on fundamental analysis.

The investment strategy in all 3 models is to generate Alpha by buying long options (asymmetric risk return) and holding shares. Beta is generated through investment into futures.

The multi-layer risk management, which is based on investment horizon, individual shares as well as total market risk minimize the negative impact of each trading position against the total portfolio.
